The screenshot shows the PALMWEB website interface. At the top, the logo "PALMWEB" is displayed in white on a green background. Below the logo is a horizontal navigation menu with the following items: Home, Browse tree, Search, Images, Contributors, Keys, Proposals and Alternatives, Register, and Log out. A red circle highlights the "Proposals and Alternatives" menu item and the user profile dropdown menu that appears below it. The dropdown menu shows the user's name "User: Soraya V." and three links: "Contribute", "Create proposal", and "My page".

Create a proposal for *Dypsis* : modify recommended description:

Dranfield et. al. 2008. *Genera Palmarum*.

Title:

Add a section

B *I* U

OVERVIEW

A complex and highly variable genus of pinnate-leaved palms that has radiated spectacularly in Madagascar and Comores, with an outlier on Pemba off the coast of Tanzania; the genus includes towering forest giants, bottle palms, litter-trappers, stemless palms and some of the most slender of all palms, and even one climbing member; all have fruit with basal stigmatic remains.

ETYMOLOGY

Derivation obscure.

[It has been found that the name comes from and it means.....]

DESCRIPTION

Very small to very large unarmed pleoanthetic monoecious palms. Stems solitary or clustered, very short, subterranean, creeping-rhizomatous, erect, in one species climbing, sometimes branched aerially by apparent dichotomy. Leaves pinnate or pinnately ribbed, neatly abscising or marcescent; sheath tubular, rarely almost open, usually forming a well-defined crownshaft, sometimes fibrous, in a few species with abundant pendulous piassava, sheath surface variously scaly and/or waxy or glabrous, auricles sometimes present; petiole absent or short to long, variously glabrous, scaly or hairy; blade entire, entire-bifid, or divided into single or multi-fold reduplicate leaflets, regularly or irregularly arranged, sometimes fanned within groups to produce a plumose appearance, leaflets usually entire, rarely praemorse, very rarely discolorous, often with abundant minute punctiform scales on both surfaces and ramenta along the main rib abaxially.
